Letter of Support

SEAD Global Efficiency Medal for Industrial & Outdoor Lighting

This announcement demonstrates support of the undersigned stakeholders for the specifications defined by the Super-efficient Equipment and Appliance Deployment (SEAD) Initiative's Global Efficiency Medal (GEM) competition for industrial and outdoor lighting products. SEAD developed a set of energy efficiency and quality specifications for these products with assistance from international lighting experts within the International Energy Agency's Energy-Efficient End-use Equipment Solid State Lighting Annex.

We will strongly consider purchasing products that are awarded SEAD Global Efficiency Medals or Awards of Excellence, are consistent with our cost-effectiveness criteria, and align with our procurement time frames. We look forward to working with the manufacturers of winning products and SEAD to ensure products meet these specifications.

We look forward to the near-term market introduction of reliable, energy-efficient, and competitively priced industrial and outdoor lighting products that increase the energy efficiency of the sector.

To confirm your support please send an email to halarcon@clasp.ngo and include your organization's logo and website to be featured in the SEAD website.
